SRINIVAS NALLA

Senior Software Engineer | Distributed Systems & Backend Infrastructure
Bay Area, CA • 303-802-9343 • nallasrinivas678@gmail.com • linkedin.com/in/srinivas-n-7a9665109

SUMMARY

Senior backend engineer with 10+ years building high-throughput, event-driven distributed systems. At GEICO, architected telematics pipelines processing 1M+ events/day at 99.99% uptime and drove a cutover strategy delivering $22M in annualized savings. Deep in Go, C#/.NET, and Java 17 with hands-on Kafka event streaming — designing consumer groups and stream processing to classify and risk-score driver trip events in production. AWS Solutions Architect certified. Targeting senior/principal backend roles where scale, reliability, and system design are the core of the job.

KEY ACHIEVEMENTS

- $22M annualized cost savings from telematics enrollment cutover strategy.
- 1M+ telematics events/day processed at 99.99% uptime.
- 8M active users served at 99.9% uptime with zero post-launch security breaches.

TECHNICAL SKILLS

Languages: Go, C#, Java 17, TypeScript, SQL (T-SQL)

Backend: .NET Core 6/8, ASP.NET Core Web API, Spring Boot, gRPC, RESTful APIs

Event Streaming & Messaging: Apache Kafka (KRaft, consumer groups, stream processing), Azure Service Bus, Event-Driven Architecture, Change Feed, Pub/Sub

Cloud (Azure): Functions, Web Apps, SQL Database, Cosmos DB, Service Bus, Key Vault, Application Insights, Redis Cache, Azure DevOps (CI/CD), AAD B2C

Cloud (AWS): EC2, S3, Lambda, IAM, SNS

Data & Databases: MS SQL Server, Azure SQL, Cosmos DB, Redis, Entity Framework Core, Dapper

Architecture: Microservices, Domain-Driven Design, Event-Driven Architecture, Distributed Systems, SOLID, High-Availability Systems

Observability: Azure Application Insights, Distributed Tracing, Alerting & SLA Monitoring

DevOps & Tools: Docker, Kubernetes, Git, Azure DevOps, CI/CD Pipelines, Playwright (BDD/SpecFlow)

Certifications: AWS Certified Solutions Architect, AWS Certified SysOps Administrator

PROFESSIONAL EXPERIENCE

GEICO — Senior Software Engineer | *Jul 2023 - Present*

Backend systems for telematics data processing on commercial and personal auto lines — high-throughput APIs, event streaming pipelines, and compliance frameworks serving millions of customers.

- Cut telematics data-processing failures 15% by designing asynchronous event pipelines (Azure Service Bus) processing 1M+ events/day at 99.99% uptime.
- Classified and risk-scored driver trip events in real time by building Kafka event-streaming consumers (Java 17) that flag risky vs. safe driving behavior for downstream pricing and telematics scoring.
- Delivered $22M in annualized cost savings by architecting and executing a technical cutover strategy for telematics enrollments.
- Served 8M active users at 99.9% uptime with zero post-launch security breaches by engineering 15+ secure REST APIs on Azure Functions (C#) for customer-facing mobile apps.
- Reduced Cosmos DB read load 50% and improved MTTR 40% by introducing read replicas and Change Feed with proactive Application Insights alerting.
- Cut new-product launch cycle time 40% by generalizing the telematics platform — core services built in Go with Java 17 supporting components — into a reusable multi-tenant SaaS foundation.
- Achieved 100% NY DFS regulatory alignment by designing the compliance framework (APIs, background jobs, API gateway).
- Increased test coverage 45% and eliminated ~20 hrs manual QA/sprint by building an end-to-end Playwright/SpecFlow BDD suite.

Caprus IT (Client: Cuyahoga County Juvenile Court) — Senior Software Engineer | *Aug 2022 - Jul 2023*

• Reduced code redundancy 40% by architecting secure SPAs and microservices (.NET Core 6, C#, React, Azure) and migrating a legacy NHibernate backend to EF6-based services.
• Cut Crystal Reports generation time 30% by tuning EF Core/Dapper queries and refactoring stored procedures.

Caprus IT (Client: Redwood Logistics) — Senior Software Engineer | *Nov 2021 - Aug 2022*
• Built a microservices platform (.NET Core 3.1, DDD) and React/Redux-Saga SPAs for logistics workflows, integrating Azure Service Bus, Cognitive Search, Redis Cache, and Auth0.

Caprus IT (Client: KY Administrative Office of Courts) — Lead Software Developer | *Apr 2020 - Nov 2021*
• Modernized legacy court applications to .NET Core / React SPAs with Azure AD B2C authentication while leading and mentoring a team of 8 engineers through the full SDLC.

HCL Global Systems (Client: KY Administrative Office of Courts) — Software Developer | *Sep 2019 - Apr 2020*
• Reduced UI load time 30% and report generation time 60% by optimizing full-stack applications (C#, ASP.NET Core, SQL).

Infosmart Technologies (Client: KY Administrative Office of Courts) — Software Developer | *May 2016 - Aug 2019*
• Saved 10,000+ hours annually in administrative processing by building and deploying a unified electronic court case system across all Kentucky court districts.

Infosmart Technologies (Client: HanesBrands Inc.) — Programmer Analyst | *Jun 2015 - Apr 2016*
• Supported 10,000+ monthly transactions by developing purchase-order modules (C#, VB.NET, T-SQL) and built SSIS ETL pipelines cutting data processing time 60%.

EDUCATION

M.S., Electrical Engineering — University of South Alabama

B.Tech., Electrical & Electronics Engineering — Jawaharlal Nehru Technological University, India
